The Insurance Service Office (ISO), issues ratings to fire departments throughout the country for the effectiveness of their fire protection services and equipment. The ISO rating is a numerical grading system and it is one of the elements used by the insurance industry to develop insurance rates. ISO gathers information on fire protection services and assigns a Public Protection Classification (PPC) number from 1 to 10. A PPC of Class 1 is superior fire protection and a Class 10 rating is unprotected. The PPC rating is comprised of three components: dispatching capabilities, water supply, and fire department personnel and equipment. For additional information on ISO ratings, please refer to the ISO website at <http://www.iso.com>. Some Districts have multiple ISO ratings. These ratings are subject to change. ***NOTE*** Do not contact your fire department for ISO information. That is the responsibility of your insurance agent. This includes: ISO ratings, closest fire hydrant, closest fire station, response times, staffing levels, water flow, etc... If you are an insurance agent you need to contact ISO for any of the above listed information. ISO can be reached at 1-800-444-4554 or <http://www.isomitigation.com>.
